

cmf.
D
E1

interior spaces separated from the ambient open-air, wherein several at least partially closed separate spaces for human activities are arranged in an unitary interior space, or in immediate connection thereto, wherein the climate in each separate space can be separately regulated to mimic mutually differing geographically related climatological conditions for such activities so that the temperature of at least one separate space corresponds to the winter temperature of Nordic or Arctic areas.

D2

Sub
E1
7

8. (Thrice Amended) A structure as defined in claim 20, wherein said water area or pool includes an ice cover and is arranged for winter swimming and/or winter jig fishing or similar activity, said pool suitably having fish or the like water animals located therein.

D3

Sub
E1
7

9. (Thrice Amended) A method for presenting different geographically related climatological conditions and activities related to the cold season of the year, wherein the temperature in functionally interconnected essentially closed separate spaces is separately regulated to correspond to the appropriate climate so that human activities or functions corresponding to a respective climate condition are brought to implementation in a

Cont. space which suitably has a mean temperature of the respective
D3 climate, one of which being winter conditions of the Nordic or
E1 Arctic areas.

Please add claim 20 as follows:

D4 Sub- 20. A structure as defined in claim 1, wherein at least one
E1 separate space comprises a water area or pool. --
